

Email Capture & Subscriber System — Add-On Proposal

Prepared for: Joe O'Connor — Spotless Carwash, Forest Park, IL

Prepared by: [PREPARED BY]

Date: June 3, 2026 · **Re:** Customer email capture + subscriber database (add-on to spotlesscarwash.com)

Executive Summary

We added the ability for your website to collect customer emails and store them in a database you own. The foundation — signup forms, the behind-the-scenes plumbing, and the subscriber database — is **built and ready to turn on**. This proposal documents that delivered work (Phase 1) and lays out the recommended next phases that turn a list of addresses into a channel you can actually market with.

An owned email list is the cheapest, most durable way to bring Forest Park customers back — it isn't rented from an ad platform or a social feed, and after 30 years on the corner you have a customer base worth staying in front of. Phase 1 captures those addresses. Phases 2–4 make the list compliant, deliverable, and usable.

Recommended next step: approve Phases 2–4 so the list can send a proper welcome, stay legal, and be exported/used — and verify a sending domain so email can go out.

Why an Email List — and Why Now

- **You own the channel.** Unlike paid ads or social posts, an email list isn't subject to anyone's algorithm or ad budget — you reach subscribers directly, for pennies per send.
- **The relaunch is the moment to start.** Every visitor to the new site is a chance to capture an address; the longer capture is off, the more you leave on the table.
- **Retention is the lever competitors are pulling.** Crystal Car Wash leans on memberships and recurring contact; an email list is the groundwork for seasonal promos, weather-driven nudges, and — later — a loyalty or membership push.

- **It's nearly free to run.** Sends go through the email service already wired into the site, so ongoing cost is minimal.

What's Already Built — Phase 1 (Delivered)

- **Two signup points.** A signup section on the home page ("Spotless updates — straight to your inbox") and a signup form on the under-construction page, so the site captures addresses whether it's live or in maintenance.
- **Editable wording.** The home-page headline, body, button, and confirmation text are editable in your content manager (Sanity) — no developer needed to change the copy.
- **A database you own.** A dedicated subscriber table in your Supabase database (with separate test and live copies) stores each subscriber's email, optional name and phone, which page they signed up on, consent, status, and dates.
- **Smart, clean handling.** Duplicate emails are prevented (case-insensitive), returning subscribers are recognized, and anyone who previously unsubscribed is asked to confirm before being re-added — so the list stays honest.
- **Secure by design.** Every database write happens on the server; the visitor's browser never touches the database or its keys.
- **An on/off switch.** A simple setting shows or hides the home-page signup whenever you want, with no code change.

Status: collection and storage are production-ready. What's intentionally **not** built yet — sending a welcome email, a one-click unsubscribe page, and an owner view of the list — is the subject of the next phases.

Recommended Next Phases (Add-Ons)

Phase 2 — Welcome Email & Opt-In Confirmation

- Automatic, branded welcome email the moment someone subscribes.
- "Confirm your email" step (double opt-in) so the list is clean and deliverable.
- **Outcome:** a professional first impression and a list that lands in inboxes, not spam folders.
- **Dependency:** a sending domain (e.g. spotlessautowash.com) must be verified first — this is already on the go-live list.
- **Investment:** [PRICE_P2]

Phase 3 — Unsubscribe & Compliance

- A one-click unsubscribe page plus an unsubscribe link in every email, wired to the fields the database already has.
- **Outcome:** keeps you compliant (CAN-SPAM) and protects your sender reputation so future emails keep arriving.
- **Investment:** [PRICE_P3]

Phase 4 — Owner Dashboard & Export

- A simple, private screen to view, search, and export subscribers (CSV), with counts by signup source.
- **Outcome:** you can actually see and use the list — or hand it to a campaign tool — without a developer.
- **Investment:** [PRICE_P4]

Phase 5 — Link Signups to Customers

- Connect email signups to your Stripe/token customers and unify them with the "keep me posted" opt-in at checkout.
- **Outcome:** one view of each customer; the ability to tell buyers apart from leads for targeted messages.
- **Investment:** [PRICE_P5]

Phase 6 — Campaign Tool Integration (Optional)

- Sync subscribers into a dedicated email-marketing tool (Mailchimp, Brevo, or similar) for drag-and-drop campaigns and automations — or keep sends in-house through the existing service if you prefer.
- **Outcome:** full campaign tooling when you're ready to send regularly.
- **Investment:** [PRICE_P6]

Investment Summary

Phase	Deliverable	Status	Investment
1	Email capture + subscriber database	Delivered	[PRICE_P1]
2	Welcome email + opt-in confirmation	Proposed	[PRICE_P2]
3	Unsubscribe + compliance	Proposed	[PRICE_P3]
4	Owner dashboard + export	Proposed	[PRICE_P4]
5	Link signups to customers	Proposed	[PRICE_P5]
6	Campaign tool integration (optional)	Optional	[PRICE_P6]
Phases 2–6 total			[TOTAL_RANGE]

Phases can be approved individually or as a bundle. Recommended priority: **2 → 3 → 4** (make the list send, stay legal, and be usable), then 5–6 as the program grows.

Timeline

- **Phase 1** — complete.
- **Phases 2–4** — approximately [WEEKS_234], delivered in sequence so each piece ships as it's ready.
- **Phases 5–6** — scheduled after the core list is live, approximately [WEEKS_56].

Assumptions & Dependencies

- A sending domain must be verified with the email provider before any subscriber emails go out (Phase 2).
- The site's privacy policy must reference the unsubscribe option before sends begin (covered in Phase 3).
- Hosting and database are already in place (Vercel + Supabase); no new infrastructure cost is introduced by this work.

Next Steps

1. Choose the phase(s) to approve — recommended start: Phases 2–4.
2. Confirm the sending domain to verify (e.g. spotlessautowash.com).

3. On approval, we schedule delivery and begin Phase 2.
